

### **ACTIVATION OF DRY CHARGED BATTERIES:**

**Remove all vent plugs and fill up with electrolyte (diluted sulphuric acid), density 1,27 kg/l (31 Bè, 36%), temperature > 15 ° C, to 10 ÷ 15 mm above the upper separator. After about 20 minutes check acid level and add electrolyte if required to reach the right level.**

**The battery is now ready for use; it is however advisable to rechar-ge the battery for about 3 hours with current in (A) equal to 10% of the capacity (Ah), should the battery have been stored for a long period.**
